## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ku et al. ("The application of ion-beam mixing, doped silicide, and rapid thermal processing self-aligned silicide technology", VLSI Technology, Systems and Applications, May 17-19, 1989, Pages 337-341).

Ku discloses the steps of:

forming a silicide layer against the polysilicon layer;

providing an impurity within the silicide layer, by ion implantation; and

providing the polysilicon layer and the silicide layer into a conductive line shape

(Fig. 1, last paragraph of first column – first paragraph in column 2 of page 337 and page 340).

Ku discloses the claimed invention except for the other various methods of doping a silicide layer, besides ion implantation. It would have been an obvious matter of design choice to dope the silicide layer by any of the other claimed methods, since applicant has not disclosed that any of the methods of doping in itself solves any stated problem other than the doping of the silicide and it appears that the method of doping

silicide is not the critical part of the invention, therefore the invention would perform equally well with any doping method of the silicide.
